CryptoPol News

News Channel relying on Community

INTRODUCTION

Information is an essential component of the societies in which we all live. It is so important that it influences our daily decisions and the way we build our future. Independence, autonomy and facts should then be required to receive the information we all deserve.

CryptoPol News has decided to explore the blockchain technologies in order to allow journalists (professional or not) to write news articles in a decentralized way where the community will be involved in the Editorial Validation Chain. Other key factors, highlighted above, are independence & autonomy. We believe that independence & autonomy may be achieved through to anonymity, so we will let journalists, or writers, decide whether they want to use their real name or a pseudonym ... we only require that the news articles are serious, documented and based on verifiable facts.

This document aims to outline as clearly as possible the foundations pf this new venture, the plan to build it, and the relevant elements needed to achieve this goal with the community.

DISCLAIMER

Potential changes

This whitepaper provides high-level information on what CryptoPol News team plans to build in the coming months. However, things can change and our findings during the development stages will influence the directions that will be taken.

Information provided in this document should not be considered as a commitment, promise or guarantee. The same applies for any individual and / or organization, named or not, involved in this project relating to the future availability of services, the use of the tokens and their performance and / or value.

Financial disclaimer

All project details provided in this document or any other means including, but not limited to social networks, email, … are for informational purposes only.

Information provided should not be considered as legal, investment, tax, ... or any kind of other advice.

Nothing stated in this whitepaper constitutes or will constitute an offer, solicitation, endorsement by the team, and any third-party, behind the CryptoPol News project to buy or sell financial instruments in the jurisdiction of operations or any other jurisdiction.

Also, please, take the time to do your own research before deciding to support CryptoPol News or any kind of decentralized project.

Finally, all comments and remarks to improve our vision are more than welcome provided they are given in a constructive way.

We wish you a good reading from now on.

TABLE OF CONTENT

THE VISION OF CRYPTOPOL NEWS

We all have had the opportunity to see how information relayed by the various broadcasters (newspaper, tv channels, social media, etc.) can have an impact on a series of daily decisions and behaviors due to social activities, commodity prices, stock markets fluctuations, diplomatic relations,...

News is today constructed to reflect the main opinion or political views of the broadcasters (and the journalists) and, at times, influenced by some other interests.

CryptoPol News aims to build an ecosystem, a community and tools that will relay information, validate, and disseminate it in a decentralized and cross universe way (real life & metaverses). This will allow anyone to create news articles, the community to validate the reliability and the quality of the information and disseminate it validated freely, anonymously or not.

Only this way we can be comfortable with the information we receive.

HOW THIS VISION WILL BE DEVELOPED

As mentioned above, it will be an ecosystem (a set of tools and tokens) that will operate for freedom purposes. But at this point, let's focus on CryptoPol News.

The team

A dedicated team is being set up to support business and technical developments, but also the processes on a global scale. The founding team, who will remain anonymous at this stage, has a broader financial, legal and technical background and will be supported by few partners.

The process

The process should be simple, clear and reliable enough to build trust and the community. Below is a high-level overview of the process, as drafted today, which will reward Editorial Chain participants with CPNEWS token and other selected tokens.

Local writers

Local writers

Local writers

Local writers (1) – anyone with BSC wallet

This is the starting point for the activities of information chain.

Anyone with writing skills may submit news articles on any topic they wish to address. A submission platform will be made available to start writing. When an information is validated, by the reviewers / proofreaders (checking the quality) and the voters, thanks to the voting app, and finally published on CryptoPol.News, they will be rewarded at 2 different levels:

Reward 1   once the information is published

Reward 2   the total views which will generate rewards for reading the article (some controls will natively be on the platform to avoid bots and abuse).

If the article is not published, rewards will not be accessible.

Local proofreaders (2) – Should own CPNEW tokens

1st level of the validation chain which is divided in 2 sub-levels.

Initial reviewers (1st sub-level), composed by community members, who will check the editorial quality of the information, whether the article does not infringe any property rights and whether there are any editorial errors. It will then be supported by a news analyzer based on artificial intelligence (AI).

News articles that meet the required quality level will then be submitted to senior reviewers (2nd sub-level), composed by the community members, for final verification before submitting the articles to voters.

The proofreaders will then be scored based on the level of validation received by the voters and rewards will be given for each article published after the validation by the voters.

CryptoPol Voting App (3) – Should own CPNEWS tokens

Ultimate level of the validation chain before to publish articles.

Each CPNEWS token will give to its owner the voting power to decide which article should be published on CryptoPol.News. It will not only be "yes" or

"no", but voters will also have to confirm their approval on various key aspects of the news articles.

Voters who vote for a news article to be published on CryptoPol.News will receive rewards based on our revenue model, as detailed below, and their level of CPNEWS token ownership.

CryptoPol.News (4)

Today used to share information on the project, CryptoPol.News expect to be the platform where articles will be published. This is the main domain which will be used to access local subdomains when they become available.

REVENUE MODEL

CryptoPol News

We expect that CryptoPol.News to have several readers which will grow over time as, with blockchain, it will be delivered globally with a first focus on the crypto community. We plan, in our developments, advertising components which will generate revenue to be shared with Editorial Chain participants. Other revenue streams will be developed, but this remains to be defined.

The rewards for chain participant

Advertising revenue will be calculated on a weekly basis and shared proportionally (table below and volume of readings) between the Editorial Chain participants and CryptoPol.News.

|	
Writer	35%
Proofreader	15%
Voters	25%
CryptoPol.News	25%

Illustrative example

If a 7-day week generated the equivalent of 1,000,000 USD in tokens

- The writers will receive globally (35%) the equivalent of 350,000 USD in token (to be shared between the writers in proportion to the volume of readings generated by their article during the 7-day period.

- The Proofreaders will receive (15%) the equivalent of 150,000 USD in token (to be shared between the proofreaders proportionally to the reads volume generated by the published articles they have validated and the seniority level).

- The voters will receive (25%) the equivalent of 250,000 USD in tokens (to be shared among voters proportionally to the number of CPNEWS tokens they own, and the published article readings they have voted for)

- CryptoPol.News will retain (25%) the equivalent of 250,000 USD in tokens used to maintain the platform, to provide additional developments, to support the activity and to generate revenue.

VIEW ON THE ROADMAP

Phase 1

☑ Emergence and design of the idea

Phase 2

☑ Token creation
☑ Website launch
☑ Social media accounts creation & preparation
☑ White paper ready

Phase 3

☑ Pre-launch contract audit
☑ Team rassemblement
☑ Detailed concept design
☐ Preparation pre-sale activities

Phase 4

☑ Listing on CoinMarketCap
☑ Listing on CoinGecko
☑ Pre-sale
☑ Start marketing activities

Phase 5

☐ Start news front end developments
☐ AMAs participation
☐ Public sale preparations
☐ Marketing strengthening

Phase 6

- Voting app developments
- News platform back ends development
- Partnerships agreement
- CEXs listing

Phase 7

- Staffing the team more
- Writers & testers registration starts
- Platform and app test launch

Phase 8

- Bug bounty distribution
- Bugs corrections
- Final tests before official launch
- Launch marketing starts
- First article submissions
- Voting app registration launch

Phase 9

- www.cryptopol.news platform official launch
Zero Fee

VIEW ON THE TOKEN

Token name   CryptoPol News

Symbol   CPNEWS

Network   Binance Smart Chain (BSC)

Contract   0xe594E6858CdF0A1072703577E9169F161b8f1b37

Contract will be renounced once we will be certain that everything is running perfectly.

Total Supply   21,000,000,000 $CPNEWS minted as from the start. No other CPNEWS will be minted at a later stage. Total supply is then equal to maximum supply.

No burn has been planned at this stage, but some possibilities exist at a later stage.

UTILITY TOKEN

$CPNEWS is a utility token which will be used as voting power to validate news articles that will be published on www.CryptoPol.News. Voters who have voted for a published article will be rewarded with CPNEWS and /or BNB.

Cross chain approach

It is indeed the goal to operate regardless the network used by the writers and the voters in order to make CryptoPol News accessible to all. However, we have decided to start with BSC as it seems to be among the most affordable, accessible and used by the majority.

The first focus is to make the news platform and the voting app available and performing perfectly as early as possible.

TOKEN DISTRIBUTION
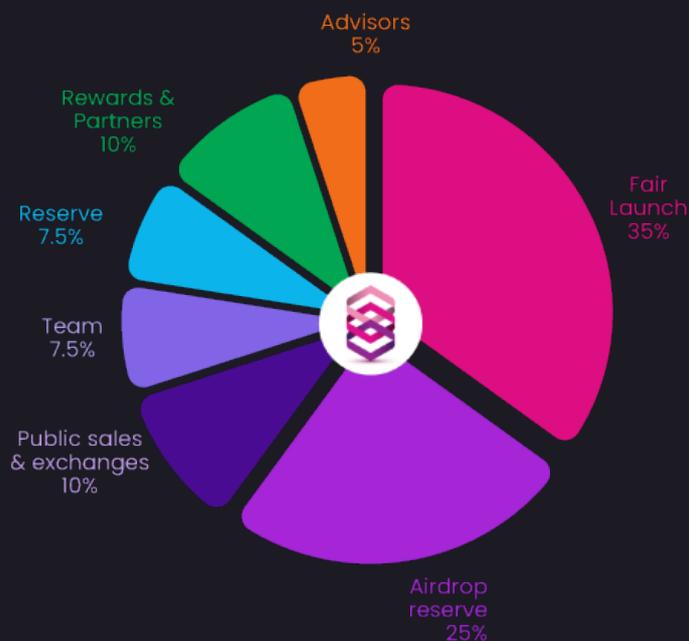

Fair Launch	35%	7,350,000,000 CPNEWS
Public sale & exchanges	10%	2,100,000,000 CPNEWS
Team	7.5%	1,575,000,000 CPNEWS
Reserve	7.5%	1,575,000,000 CPNEWS
Rewards & Partners	10%	2,100,000,000 CPNEWS
Advisors	5%	1,050,000,000 CPNEWS
Airdrops Reserve	25%	5,250,000,000 CPNEWS

Fair Launch

35% will be used to create the initial liquidity, to fix the launch price and to start the business activities. These activities are defined in the Fund allocation table in the next section.

Make sure you are connected to one of our communication channels (shown on the website) to get the right information.

Public sale & exchange

10% will be used for public sales and for exchanges. This part of the token is locked and will be released progressively, details will be shared at a later stage.

Team

7.5% will be retained for the team and will be locked for at least 18 months.

Reserve

7.5% will also be retained as a strategic reserve. The business may encouter some difficulties, which is why we prefer to keep a certain amount of token stored by our side. Additionally, these tokens will be locked for a period of 3 months which will be extended monthly until we release them or burn them (partially or totally). The decision will be made based on the business context in which we will be. of course, we will inform you in due time. This may also be used for additional exchanges.

Rewards & Partners

10% will be used to promote CPNEWS and rewards community to act positively for the promotion of the business. It includes a part reserved as a bug bounty for early testers that will help us to find elements that are not properly developed, allowing us to fix them before the first official launch. To be clear, the goal is not and will be not to "cash burn all the available tokens and or funds" to cause the value pump. The goal is and remains to build a strong community that will support the business throughout its journey.

Advisors

5% will be used to reward advisors who will help us to develop, deploy and drive this business the right way.

Airdrops Reserve

25% is used to reward the community that supports the project. Some tokens have already been airdropped; the remaining tokens have been stored in the reserve wallet.

TOKEN TAXES & REFLECTION

| 10% Taxes	
4%	Rewards to HODLers
3%	Marketing
3%	Liquidity

FUNDS ALLOCATION

Public & Legal Affairs 5%

Liquidity 10%

Reasearch & Dev. 35%

Operations 15%

Security & audits 15%

Marketing & Growth 20%

Research & Developments	35%
Marketing & Growth	20%
Security & Audits	15%
Operations	15%
Liquidity	10%
Public & Legal Affairs	5%

Depending on the different agreements we may have, funds will be used in either crypto or in Fiat. For Fiat usage, they will be converted through exchanges that allow this kind of conversion.

Research & developments (R&D)

For the R&D part, the team will be supplemented by subcontracting companies that will bring additional skills required for the project. The core team will then work in close collaboration with these subcontractors. All these people must to be paid and 35% of the funds collected will be used for this purpose as well as for the required tools and services.

Marketing & growth

There is no business if no one knows about it. From the start, we will need to build a marketing strategy that aims to inform, communicate and increase the community buy-in. 20% of the collected funds will be used to this purpose. The goal is not to burn all the marketing funds to pump the price of the token, but to ensure a growing adherence to the project, to strengthen the community and to build a strong brand, because this is key for this project.

Security & audits

We should ensure that the set of tools and the processes behind them are completely secure and work perfectly according to the processes that have been designed. 15% of the funds collected will be used to test, audit and secure the developments.

Operations

A set of services will be provided with the tools. People or partners behind this are named operators and will need to be paid. We want the user experience to be as optimal as possible. At the launch we will not be generating revenues. Therefore, we have decided to reserve 15% of the funds to cover these services.

Liquidity

In addition to the liquidity generated and locked at the end of the pre-sale phase and the liquidity generated by all transactions we have reserved 10% of the funds collected to increase the level of liquidity to attempt to reduce the price volatility of the token. It has not been decided yet when the liquidity will be added. This decision would directly be linked to the behavior

of the token. We will make sure to communicate on due time about this point. Be sure to follow us on the various means of communication available.

Public & Legal Affairs

We are playing in a field (decentralized business) that is changing a lot as it evolves and becomes mainstream. To deal with any legal issues and disruptions, we must be well prepared, covered and compliant with existing and potential new laws. 5% of the funds collected will be used to be supported by legal consultants and / or lawyers who will help us to make the project as compliant as possible, to create agreements with our subcontractors, suppliers and partners.

CONCLUSION

As mentioned in the introduction we expect to create an ecosystem that will support free, fair and validated information. The first stage of this coming ecosystem concerns the news shared daily. The next stages, out of 3 identified today, will be revealed when we are far enough along and, above all, when appropriate.

Next, we would like to confirm that we are completely dedicated to this project and ready to make it as successful as possible.

Finally, we hope you enjoyed reading this whitepaper and are as excited as we are, ready to move on and help to build CryptoPol.News.

Looking forward to talking to you on the communication channels we have created for.
